BiasAperture — Demographic Fairness Audit Dossier

Diagnostic Demographic Bias Evaluation & Regulatory Traceability Report

AUDITED MODEL
MobileNetV2 0.35 Rep Gender Classifier (Seeed SSCMA)

EVALUATION DATASET
FairFace Benchmark Dataset (Validation Split) (N=10954)

PROTECTED AXIS
Race

AUDIT DATE
2026-10-19 02:52:45 UTC

Diagnostic Scope & Non-Intervention Guarantee:

BiasAperture is engineered exclusively as an external diagnostic auditing, statistical significance testing, and regulatory traceability platform. It does **not** perform model retraining, in-processing debiasing, or synthetic image generation. In adherence to statistical integrity safeguards (NFR-003), demographic subgroups with fewer than 30 samples ($n < 30$) have point estimates suppressed to prevent unreliable compliance claims.

7 / 7	Overall (Table 1)	DIR = 0.855	0
SUBGROUPS WITH SIGNIFICANT DISPARITY (P < 0.05)	WORST DISPARITY COHORT (28 METRIC FAILURES)	WORST HEADLINE METRIC (OVERALL)	SUBGROUPS FLAGGED N < 30 (NFR-003)

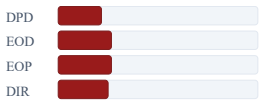

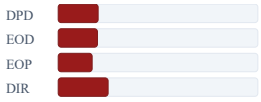

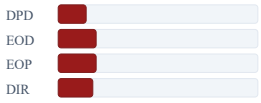

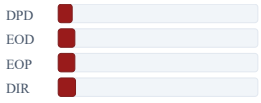

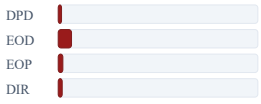

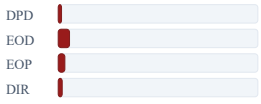

1. Headline Fairness Metrics (Core Four — Cross-Group Overview)

Summary metrics evaluated across all eligible demographic strata (n ≥ 30 per NFR-003). Accompanied by 95% stratified BCa bootstrap confidence intervals and Pearson's χ^2 test of independence. Plotted on a calibrated [0.0, 1.0] domain with null-point reference and threshold lines.

Metric Name	Point Estimate	95% Bootstrap CI	CI Band vs. Null	Significance (p-value)	Regulatory Clause
Demographic Parity Difference	0.125	[0.099, 0.155]		p=0.0000 **p < 0.05**	EU AI Act Art. 10(2)(f) / NIST Measure 2.11
Equalized Odds Difference	0.137	[0.102, 0.160]		p=0.0000 **p < 0.05**	EU AI Act Art. 10(2)(g) / NIST Measure 2.11
Equal Opportunity Difference	0.137	[0.100, 0.161]		p=0.0000 **p < 0.05**	EU AI Act Art. 10(3) / NIST Measure 2.11
Disparate Impact Ratio	0.855	[0.824, 0.885]		p=0.0000 **p < 0.05**	EEOC 4/5ths Rule / EU AI Act Annex IV §2(g)

2. Per-Subgroup Disparity Matrix

Detailed stratification across individual demographic groups, ordered by largest deviation from the null (no-disparity) point, most significant first. Subgroups below the NFR-003 sample threshold (n < 30) are strictly flagged, uncomputed to prevent small-sample estimation artifacts, and summarised separately below.

Subgroup	Sample Size (n)	DPD	EOD (Max-Gap)	EOP	DIR (Symmetric)	Deviation from Null (red = p < 0.05)	Data Integrity Status
Black	1556	0.065	0.080	0.080	0.925		Audited (Valid)
Middle Eastern	1209	0.060	0.059	0.051	0.925		Audited (Valid)
White	2085	0.042	0.057	0.057	0.948		Audited (Valid)
Southeast Asian	1415	0.018	0.034	0.034	0.978		Audited (Valid)
Indian	1516	0.021	0.025	0.025	0.974		Audited (Valid)
East Asian	1550	0.005	0.020	0.007	0.994		Audited (Valid)
Latino_Hispanic	1623	0.005	0.017	0.010	0.994		Audited (Valid)

3. Targeted Disparity Explainability & Proxy Attributions

Demographic Surrogate Associations — Mean absolute contribution to surrogate log-odds

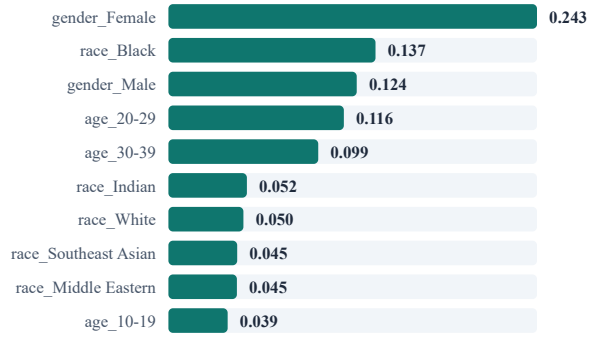

Surrogate additive Shapley attributions computed for statistically flagged disparities ($p < 0.05$, $n \geq 30$). A global ridge-regularized logistic surrogate model is fitted to predictions across the full evaluation dataset to estimate feature proxy influence. Mean absolute Shapley attributions measure the proxy contribution of each demographic feature to surrogate log-odds.

> **Non-Causal Disclaimer (Bilodeau et al., 2024):** Attributions identify empirical associations between demographic proxy features and model predictions. They do *not* establish causal relationships or prescribe remediation. This is a diagnostic tool only — no model retraining, in-situ weight modification, or causal intervention is performed.

Statistically Flagged Disparities Triggering Surrogate Analysis

race=Global • DPD

Global Demographic Proxy Feature Importance

Demographic Feature	Mean absolute contribution to surrogate log-odds
gender_Female	0.2433
race_Black	0.1367
gender_Male	0.1243
age_20-29	0.1158
age_30-39	0.0989
race_Indian	0.0518
race_White	0.0495
race_Southeast Asian	0.0454
race_Middle Eastern	0.0452
age_10-19	0.0391

4. Governance Documentation & Intended Use

> **EU AI Act (Regulation EU 2024/1689) Article 10 / Annex IV Alignment:** This audit dossier provides verifiable diagnostic documentation of demographic performance disparities. It does not perform model retraining or in-situ weight modifications.

Model Description: Lightweight MobileNetV2 architecture with depthwise separable convolutions and inverted residual blocks fine-tuned on FairFace, evaluating edge-scale model fairness trade-offs.

Backend configuration: dual. Both backend executions completed.

Cross-backend agreement checks point estimates only; bootstrap, hypothesis tests, and reporting share implementation. Consult execution logs for backend failures and divergences.
